Need an example of
what we mean?

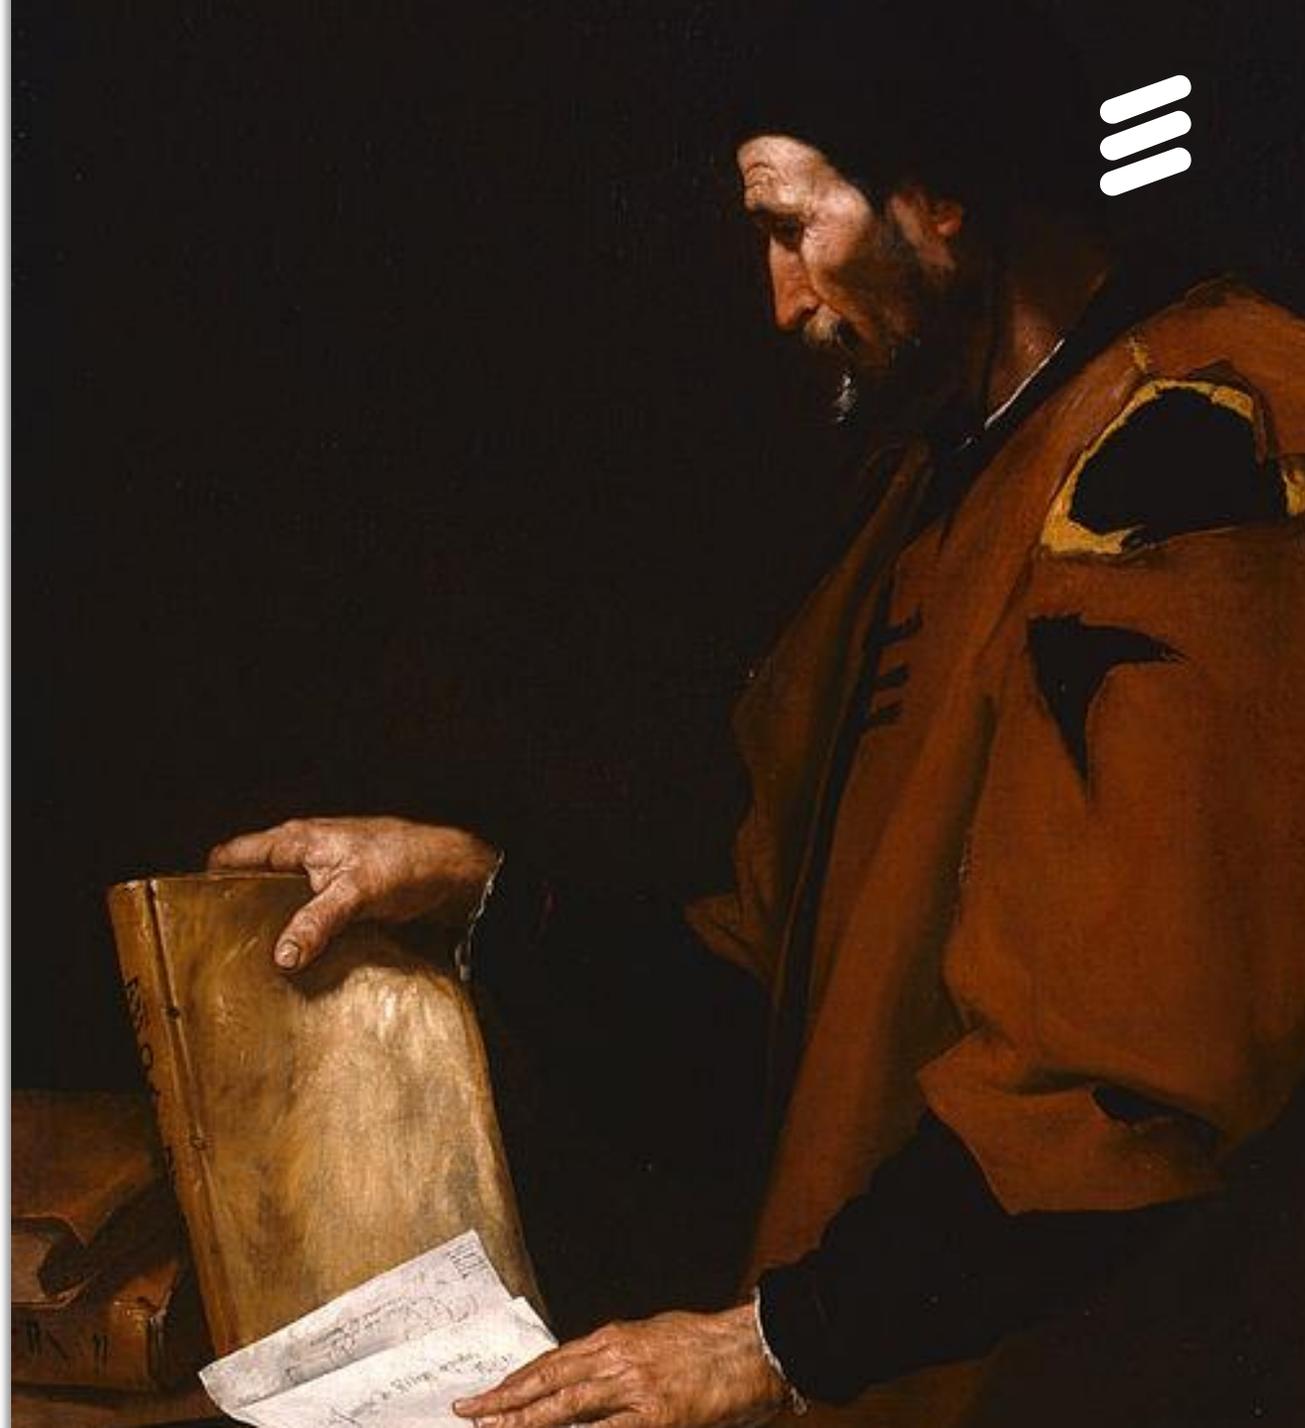

In the 1500s, the prevailing ideology was that Earth is the center of the universe and that all other planets and moons revolve around it, based on a doctrine by Aristotle.

“Find”

Galileo built an early telescope to validate this information, but found evidence that Venus orbited the sun, not Earth. His findings discredited Aristotle's claim.

IN FIORENZA, Per

CON LICE

Galileo published books on his theories, including Dialogue Concerning the Two Chief World Systems, which sought to disprove the original theory.

This allowed others to find his work.

“Share”

Ericsson's introduction of 5G will allow us to connect to people, industries, societies and ideas...

faster than ever before.

Experiential Stories

Are allowing us to experience events and news through virtual reality. Stories feel more real through self-verification of experience. But, how can we ensure that our experiences haven't be edited?

Example – UN used VR to create a 360 degree report inside of a refugee camp.

Citizen Journalism

Creates an illusion of trust because it's not controlled by big corporations. But, citizens can still manipulate truth.

Example – an eyewitness report about Steve Jobs' heart problems resulted in an 10 percent apple stock decrease, then turned out to be false.
